G series

G series

EXCELLENCE IN PERFORMANCE

2.1 G SERIES

Advantages

- **high tilting stiffness**
- **low friction**
- **high precision output bearing**
- **high torque density**
- **reduced lost motion settings**
- **high torque overload capacity**

The **G series** a new generation of TwinSpin® high precision reduction gears with a new design of the main bearing and improved performance for the most demanding applications. G series introduced the increase in torque to weight ratio in comparison to the previous generation. Innovative design of main bearing resulted in the unprecedented tilting stiffness, high precision of the output bearing, and modularity of design which allows for customized solutions. Further improvements introduced with G series has yielded further friction reduction in transmission mechanism, lower hysteresis and low settings of Lost Motion, especially in small sizes. Finally, new sizes of reducers have been introduced with G series in standard and hollowshaft design to broaden the portfolio and application range of TwinSpin® reducers.

Tab. 2.1a: G series features

| | |
|---|--|
| Case | Through holes in case |
| Input flange connection | The shaft sealing / adapter flange is offered in the following versions: a) motor connection flange b) sealed input cover c) without flange |
| Input shaft design | The input shaft is offered in the following versions: a) shaft with keyway b) based on special request |
| Installation and operation characteristics | Wider range of modular configurations |

RIGHT TO CHANGE WITHOUT PRIOR NOTICE RESERVED

- 1) Mean statistical value. For further information see chapter Torsion stiffness, Tilting stiffness.
- 2) Load at output speed 15 rpm and $L_{10} = 12\ 000$ hrs.
- 3) Moment M_c value for $F_a = 0$. If $F_a \neq 0$, see chapter 3.5.
- 4) Axial force $F_{a,max}$ value for $M_c = 0$. If $M_c \neq 0$ see chapter 3.5.
- 5) The parameter depends on the high precision reduction gear version.
- 6) The parameter depends on the version of the high precision reduction gear, ratio and lost motion.
- 7) The parameter values are informative. Exact value depends on the specific version of the high precision reduction gear.
- 8) Temperatures of the high precision reduction gear lower than 20°C will cause higher no-load starting or back driving torque.
- 9) Instantaneous speed peak that may occur within the working cycle.
- 10) For more information please contact the SPINEA® sales department.

IMPORTANT NOTES:

- Load values in the table are valid for the nominal life of $L_{10} = 6\ 000$ [Hrs].
- High precision reduction gears are preferred for intermittent cycles (S3-S8); the output speed in applications is an inverted variable.
- The continuous mode cycle (S1) should needed to be consulted with the manufacturer.
- If the output speed in application is below than 0.1 rpm please consult with the manufacturer.
- The values in the table refer to nominal operating temperature.
- Please note the temperature on the gear case that should not exceed 60°C.

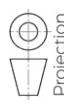

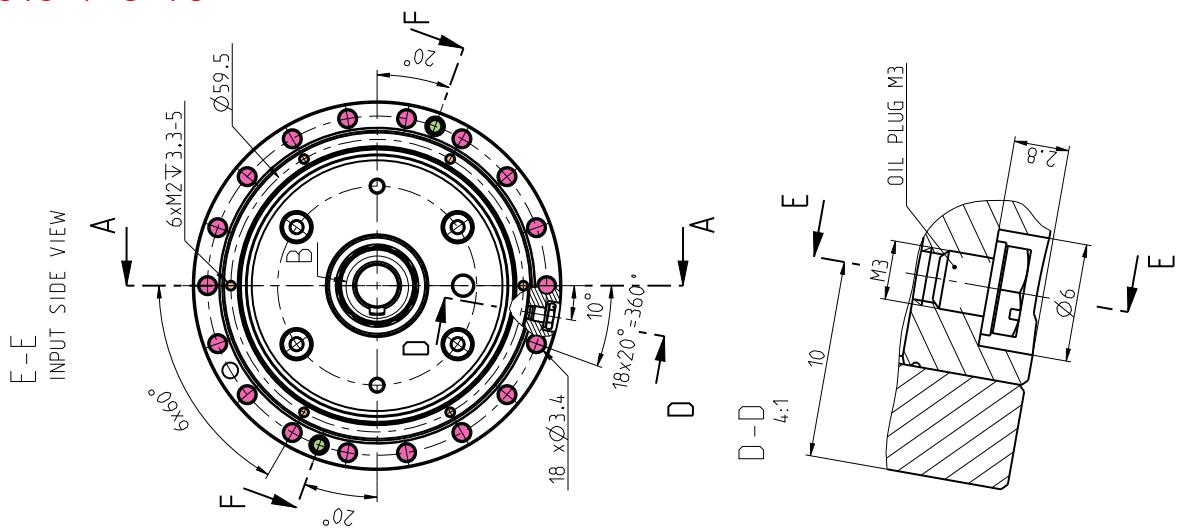

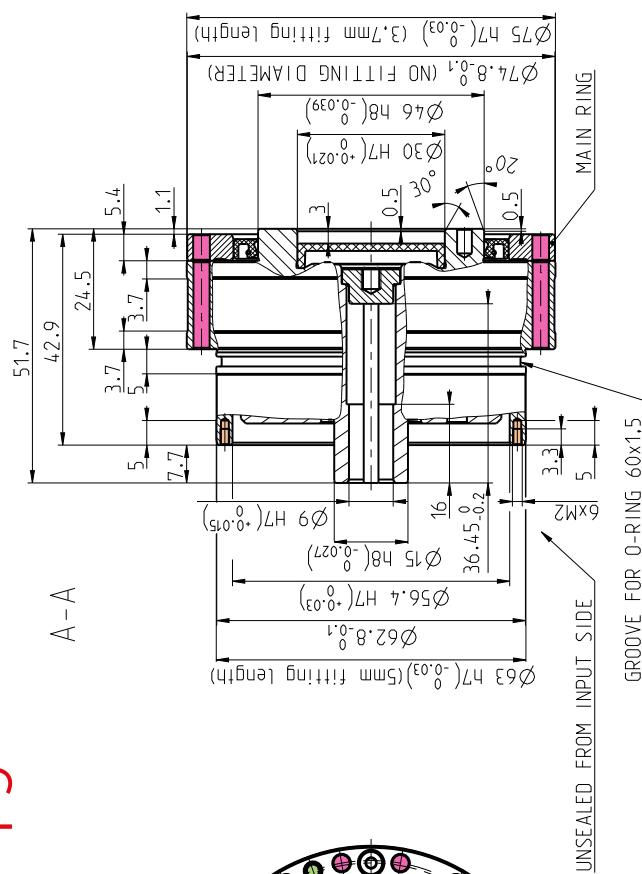

The ratios highlighted in bold are recommended by SPINEA® as optimal versions in terms of price and delivery.
